

Succession-Planting Schedule

Plant smaller amounts more often so harvests arrive steadily and open spaces stay productive.

Replanting Check & Garden Observation Log

Check each space before replanting, then record plant health, pests, irrigation and needed follow-up.

Before replanting

- Remove roots and debris from diseased plants.
- Add finished compost if the soil needs organic matter.
- Replace nutrients based on the next crop's needs.
- Check irrigation coverage.
- Choose a crop suited to the remaining season.
- Rotate plant families when practical.
